

Q&A with Edward Mutafungwa, AALTO University

- 🌐 The competitive pressures will see different operators rolling out denser 5G small cells deployments. Wouldn't this only worsen challenges of densification you have highlighted?
- 🌐 Who do you see as key players in facilitating dense deployments in a tolerable/sustainable manner?
- 🌐 There have been some very well publicized challenges with dense deployments in the US. How is the EC responding to similar challenges in the EU?
- 🌐 With 5G use cases becoming ever more diverse and 5G infrastructure needs going beyond what we have today, are there any small cell deployment scenarios that will present not only interesting technical but also regulatory challenges?
